Experience

Educational Initiatives

Jan 2024 – Present

Software Development Engineer (Node, Angular, PostgreSQL, Redis, Kafka)

Ahmedabad, Gujarat

- Led the migration from monolithic, per-product content management to a unified cloud-native microservices architecture on AWS, architecting and owning the Core Content Microservice within a **10+** services platform that consolidated 4 products into a single internal authoring platform managing **80K+** content items designed with API Gateway routing, JWT authentication, and security compliance standards ensuring cross-product scalability.
- Owned the end-to-end content lifecycle across **4** products, implementing bulk authoring, review workflows, versioning, translation, assessment blueprint validation, and rules-engine-driven sequencing that streamlined content operations and accelerated learning content delivery.
- Optimized Search API backend performance, reducing P99 latency from **10–15s to 800–900ms (94% improvement)** via batch processing, parallel hydration/execution, composite indexing, N+1 query elimination, pagination, and PostgreSQL recursive CTEs; enabled horizontal scaling.
- Integrated LLM-assisted content generation using multiple LLMs with **EI-MCP Gateway-backed** context retrieval, grounding prompts with student-performance signals, skill-map metadata, blueprint validation, and pedagogy rules; added reviewer feedback and rule-based validation loops, reducing manual content creation time by **40%**.
- Built reusable Angular UI components for the internal authoring platform, reducing UI development time by **30%** and accelerating feature roll-outs across product teams.
- Devised a Redis Cluster caching strategy (cache-aside and write-through, configurable TTL) reducing PostgreSQL load and improving API response times by **20–30%**; defined API contracts with PMs and QA ensuring backward compatibility across **4** products with zero breaking changes, adhering to secure coding standards throughout.
- Conducted design and code reviews for **20+** features, enforcing Jest-based unit testing standards; mentored developers on microservices best practices, improving delivery speed by **25%** and reducing production bugs by **40%**.

Capgemini

Jun–July 2023

Software Engineering Intern (Node, React, MongoDB)

Gandhinagar, Gujarat

- Designed a proof-of-concept on India's **ABHA** Sandbox to digitize hospital workflows across **3** modules patient registration, records management, and consent verification validated against **200+** simulated records.
- Delivered **2 LIMS** modules integrated with the national health ecosystem, enabling digital health records, ABHA card generation, secure medical document storage, and consent-based verification, reducing dependency on physical reports.
- Engineered and tested **10+** RESTful APIs for seamless data exchange and interoperability across digital healthcare systems, ensuring compliance with healthcare standards.

Projects

Distributed Job Processing System ([GitHub](#)) | *Node.js, Kafka, PostgreSQL, Redis*

Feb–March 2026

- Architected a job scheduler using Kafka with at-least-once delivery and horizontal scalability across **3** consumer groups.
- Established fault-tolerant execution with retries (upto **3** attempts), dead-letter queue (DLQ), and crash recovery.
- Ensured idempotent processing with zero duplicate execution using database locking and idempotency keys stress-tested against **100+** concurrent jobs with injected failures, confirming full recovery and zero message loss.

Technical Skills

Languages: Java, JavaScript (TypeScript), Python

Backend & Distributed Systems: Node.js, Express.js, Spring Boot, Microservices, Event-Driven Design, Kafka

Databases: PostgreSQL, Redis, MongoDB, MySQL, Elasticsearch

Frontend: Angular, HTML/CSS

Cloud & DevOps: AWS (EC2, S3, RDS, SQS, SES), Docker, CI/CD (Jenkins), Load Balancing, Nginx

Tools & Environments Git, GitHub, Bitbucket, Postman, VS Code, IntelliJ IDEA, Linux, Cursor

Practices: Agile/Scrum, Unit Testing (Jest), Code Reviews, Secure Coding, TDD, API Design.

Education

Pandit Deendayal Energy University

Sep 2020 – May 2024

BTech. in Computer Engineering

CGPA: 9.80

Achievements & Certifications

Authored “**Drug Review Classification Using Sentiment Analysis of Drug Reviews**” presented at **IEEE WCONF 2023**, Raipur, contributing to advancements in NLP-driven drug classification. ([Link](#))

Solved **700+** problems on [LeetCode](#) with consistent focus on data structures, algorithms, and system design problem-solving.

Microsoft Certified:**Azure Fundamentals (AZ-900)** · Mar 2023 ([Link](#))
